

fNIRS Recording Instructions

- Each recording will last ≈ 15 mins, and consists of 3 trials in the following order.
 - NHM (No Head Motion)
 - SHM (Small Head Motion)
 - LHM (Large Head Motion)
- Each trial lasts **8 BLOCKS**, and each block contains a **TAP** ($\approx 10s$) and **REST** ($\approx 20s$) phase.
- Before and after each trial there is a **BASELINE** ($\approx 20s$) recording.
- Please stare at the **CENTRE TEXT** during the entire test
- You are asked to stay **COMPLETELY STILL** in the duration of the test, else the test will be invalid.
 - Do not move your arms or hands unless instructed.
 - Do not speak or move your face unless instructed.
 - Do not turn your head unless instructed.

Baseline

Upcoming trial: SHM, prepare to tap...

fNIRS Recording Instructions

- **TAP**
 - During a **TAP** period, you are to tap your **RIGHT HAND** around once to twice per second (1-2hz).
- **REST**
 - During a **REST** period, you are to remain completely still, staring at the text on screen.
- In the motion-infected trials (SHM, LHM) during the **TAP** phase there will be a **countdown** followed by 1s of **instructed motion**. This will be clear to you via a small countdown on screen and the colour of the **TAP** text changing.
- This text will be **YELLOW** for **SHM**, and **RED** for **LHM**. In **NHM** there is no motion, so no colour change.
- Motion to induce
 - Each induction of motion should last 1s (as long as the screen shows).
 - **SHM** - You are to RAISE / LOWER your EYEBROWS, and MOVE your FACE.
 - **LHM** - You are to move your head $\pm 20^\circ$ degrees side to side and/or up and down.Refer to Harry to see the different variations of motion.

DON'T WORRY, we will run a practice recording first.
